These weighted criteria are provided to assist the Proposers in the allocation of their time and efforts during the submission process. The criteria also guide the Selection Committee during the short-listing and final ranking of Proposers by establishing a general frame work for those deliberations.

Short listed proposals may be selected for an interview prior to a recommendation being presented to the Town Council. As the best interest of the Town may require, the right is reserved to reject any and all proposals or waive any minor irregularity or technicality in proposals received. The Town will determine which Proposers are “responsible and responsive”.

Any B&B or WB&B Tree which shows evidence of having been handled by a method other than the method outlined above, and resulting in damage to the Tree such as a cracked or broken rootball or the roots that have been loosened within the ball, will be rejected.
- For Trees grown in soil of a loose texture, which does not readily adhere to the root system, especially in the case of large Tree material, wired B&B Trees must be used. For WB&B Trees, before the Tree is removed from the hole, hog wire with approximately 1- to 1 1/2-inch openings or a Kerr's wire basket (Vermeer standard, caretree standard, caretree truncated or clegg) must be placed around the burlapped ball and looped and tensioned until the burlapped ball is substantially packaged by the tightened wire netting, such as to prevent disturbing of the loose soil around the roots during handling.

b. Container-Grown Trees (CG):

1. It is preferable that all Trees under this Contract be field grown. In the instance that requested a Tree is not available as field grown, Container-Grown (CG) Trees may be used subject to the approval of the Town. Any Container-Grown (CG) Trees which have become "pot bound" or "root bound" for which the top system is out of proportion (larger) to the size of the container, will not be accepted.
2. CG Trees must not be removed from the can until immediately before planting, and with all due care to prevent damage to the root system.

c. Specimen Trees (Florida Fancy):

1. When specimen or Florida Fancy Trees are called for, they will be labeled as such on the plants and on Work Orders.

3.4 Trees

- a. All trees must be no less than Florida No. 1 equivalent, or better, at the time of installation and final acceptance.
- b. Habit of Growth: All trees must have a habit of growth that is normal for that species and must be sound, healthy, vigorous and free from insects, tree diseases and injuries.
- c. All Trees must be planted in accordance with ANSI A300 (Part 6), Planting and Transplanting Standards.

d. Measurement of Trees & Ground Cover

1. Trees and Ground Cover

5.5" or more	Increase in proportion	Up to 48", then decrease in proportion or larger size diameter

- ii. Height: The height of the tree will be measured from finish grade and continue up to where the main mass of the Tree uniformly ends. The height must not include any singular or isolated parts of the tree, such as leaves, shoots, branches, limbs or fronds, which extend out beyond the main mass of the Tree.
- iii. Width: The width of tree must be measured from one side of where the main mass uniformly ends and continue to the other side of where the main mass of the tree uniformly ends. The width must not include any singular or isolated parts of the tree, such as leaves, shoots, branches, limbs or fronds, which extend out beyond the main mass of the Tree.

- iv. Caliper: The caliper of tree trunks must be measured three feet (3') above the ground unless another method of measurement is indicated otherwise on the plans.
- e. All sizes shown for trees available as part of this Contract are to be considered as minimums. All trees must meet or exceed these minimum requirements for height, spread, etc. as indicated on the plans. When Tree sizes are specified as a range of size, installed material must average the mean of the range specified.
- f. Die-Back and Leaf-Drop: Tree showing signs of die-back or leaf-drop will not be accepted and must be removed from the project immediately if so directed by the Town. Therefore, any trees with tendencies toward leaf-drop or die-back must be root pruned early enough to provide a sound network of hair roots prior to relocation.
- g. Mechanical Destruction of Foliage: Mechanical destruction of foliage resulting from root pruning must not affect more than 10% of the total foliage prior to planting under a Work Order. Loss of foliage caused by seasonal change will be accepted.
- h. Spanish Moss: If Spanish Moss (*Tillandsia useoides*) exists on trees, it must be completely removed prior to planting.
- i. Trees will not be accepted when the ball of earth surrounding its roots has been cracked, broken or otherwise damaged.
- j. Root pruning of Trees, when required by the Town, must be done a minimum of six (6) weeks or for a period as determined by the Town, prior to planting. Prior to root pruning, the Contractor must give 48-hour advance notice to the Town advising of the date to root prune any Tree. This will allow for any inspections during or after the root pruning, if necessary.

3.5 Transporting and Handling of Palms, Trees, and Container Materials

Transport material on vehicles large enough to allow Trees to be uncrowded. Cover to prevent wind damage during transit.

3.6 Topsoil and Sand

- a. Topsoil for use in preparing soil for backfilling tree pits must be twenty percent (20%) muck and eighty percent (80%) sand and be fertile, friable, and of a loamy character, without mixture of subsoil materials, and obtained from a well-drained, arable site. It must contain three (3) to five (5) percent decomposed organic matter and must be free from heavy clay, coarse sand, stones, lime, lumps, plants, roots or other foreign materials, or noxious weeds. It must not contain toxic substances, which may be harmful to Tree growth. Provide soil from ground that has never been stripped, with a slight acid reaction (5.0 to 7.0 pH) and without an excess of calcium or carbonate, delivered in a friable condition. See tree planting detail for extent of backfilling requirements.
- b. Sand must be coarse, clean, well-draining native sand. Contractor must submit results of soil tests for topsoil and sand proposed for use under this contract for approval by the Town.

- c. All must comply with the State of Florida fertilizer laws.

3.9 Staking and Guying

- a. Staking and guying must not be attached to the trees with nails. Any method of staking and guying, other than those indicated in ANSI A300 (Part 6)-2012 Planting and Transplanting/2015 FOOT Design Standards where applicable must receive approval from the

Town prior to their installation. Refer to the heading "Setting of Trees", as detailed in Article 3.15 for additional information.

- b. The Contractor is responsible for performing all staking and guying in accordance with all applicable regulation, ordinances and code requirements.

3.10 Tree Root Barriers

- a. 18" and 24" tree root barriers must be black, injection molded panels with a minimum of 0.080" wall thickness in modules 24" long; manufactured with a minimum 50% post-consumer recycled polypropylene plastic with added ultraviolet inhibitors. Each panel must have: not less than 4 molded integral vertical root deflecting ribs, a double top edge, a minimum of 9 anti-lift ground lock tabs and an integrated zipper joining system. 18" and 24" deep tree root barriers must be #UB 18-2 and #UB 24-2 by Deep Root Partners, LP or approved equal (1-800-458-7668).
- b. 36" and 48" tree root barriers must be black polyethylene extruded panels with added ultraviolet inhibitors and a minimum of 0.080" wall thickness in modules 24" long. - c. When a tree is planned to be installed adjacent to public hardscape, i.e. sidewalk, street, a root barrier may be installed at the Town's request. The Contractor is responsible for installing all tree root barriers in accordance with the manufacturer installation standards.

3.11 Mulch

Mulch must be 100% Double Shredded Cypress Mulch, Grade A. Color to be selected by Town.

3.12 Grading

- a. It is the responsibility of the Contractor to provide the final grading so the final level for planting areas conforms to surrounding grades and is at the proper elevation with relation to sodded/grassy areas, sidewalks, paving, drain structures and other site conditions, unless indicated otherwise in the Work Order, that may include plans, drawings or sketches.
- b. Tree Areas Next to Pavement: All planting areas next to or in pavement areas, such as, but not limited to, curbs, roads drives, walks, terraces, decks and slabs must be set so that the top of the mulch is one-inch (1") below the top of the pavement area or as indicated otherwise in the Work Order, that may include plans, drawings or sketches, and the top of sod is one-inch (1") below top of pavement area, measured from the top of pavement to the top of grass blades after mowing.

3.13 Herbicide Treatment

In all areas infected with weed or grass growth, a systemic herbicide, such as "Roundup", must be applied per manufacturer's rates. When it has been established where work will be done, the

systemic herbicide must be applied in accordance with manufacturer's labeling to kill all noxious growth. Contractor must schedule its Work to allow more than one application to obtain at least 98% kill of undesirable growth. Once the existing vegetation is dead, excavate and haul to a legal dumpsite the vegetation and the top two-inches (2") of existing soil/sand. The Contractor must exercise extreme care to prevent damage to desirable existing growth. If necessary, the Contractor must conduct a test to establish suitability of product and applicator to be used on this project, prior to execution of the full application.

Upon the request of the Program Manager, the Contractor must provide a schedule for herbicide treatment.

3.14 Preparation

- a. Utility Locates: Contractor must contact Sunshine State One Call at 811 to ensure that utility locates are performed before any digging is commenced by the Contractor.
- b. Staking Tree Locations: Stake or mark Tree I locations prior to Tree hole excavation, based on information from the plans.
- c. Contractor should reference 2015 FOOT Design Standards when preparing a site for planting, unless otherwise directed by the Town.
- d. Sub-surface Conditions: Some or all work areas may be compacted or contain existing material such as limerock which may interfere with adequate vertical drainage and/or proper Tree survival and growth and therefore removal of this material is part of the scope of work for the project. The Contractor is responsible for insuring adequate drainage in these areas and must remove this existing material, as required, by such means as augering, drilling or rototilling. Therefore, the Contractor will be required to perform additional excavation on the holes for all trees. This additional excavation must be to a depth beyond the required excavation depth indicated below for the holes, in order to insure proper vertical drainage necessary for plan survival and growth.
- e. The Contractor must remove all existing concrete, asphalt concrete and rocks over four inches in diameter, above and below grade in planting pits, from areas to be landscaped.
- f. Excavation of Tree Holes
 1. General
 - i. Excavation of Tree holes must be roughly cylindrical in shape with the sides approximately vertical. The Town reserves the right to adjust the size and shape of the Tree hole and the location of the Tree in the hole to compensate for unanticipated structures or unanticipated factors which are a conflict.
 - ii. The excess excavated material from the Tree holes must not be used to backfill around the Tree. Such material must be disposed of offsite at the expense of the Contractor.
 - iii. Contractor must remove any existing roots that may impact the planting of a new tree.

2. Trees

- i. Depth of hole must be equal to the rootball depth plus eight (8") inches, unless further depth is required to provide adequate drainage as per Articles 3.1 and this Article.

3.15 Installation

a. Setting of Trees

1. Trees must be planted at their natural and original planting level prior to their placement on this project. When lowered into the hole, the Trees must rest on the prepared hole bottom such that the surface roots at the top of the rootball are level or slightly below the level of the surrounding final grade after settlement. The practice of plunging, burying or planting any Tree such that the surface roots at the top of the rootball are below the level of the surrounding final grade, will not be permitted unless it is indicated otherwise in these specifications, details or it is approved in writing by the Town prior to such action being taken. The trees must be set straight or plumb or normal to the relationship of their growth prior to transplanting. The Town reserves the right to realign any trees after it has been set.
 2. Trees too large for hand handling, if moved by winch or crane, must be thoroughly protected from chain, rope or cable marks, girdling, bark slippage, limb breakage and any other damage that might occur by improper handling or negligence.
- b. Backfilling: Use soil prepared as described in this Section. Backfill the bottom two-thirds (2/3) of the planting hole and firmly tamp and settle by watering as backfilling progresses. After having tamped and settled the bottom two-thirds (2/3) of the hole, thoroughly puddle with water and fill remaining one third of the hole with planting soil, tamping and watering to eliminate air pockets.
- c. Apply fertilizer to trees three (3) weeks after planting.
- d. Contractor must, for fertilizer for large trees that requires five (5) pounds or more of fertilizer, Place fertilizer evenly spaced at the edge of the root ball into holes poked in the soil to a depth that allows the fertilizer to be poured below the root zone of adjacent shrubs and grass, to avoid burning of these Trees.
- e. Water Trees and sod thoroughly two days prior to applying fertilizer, and wash fertilizer off Tree leaves immediately after fertilizing.
- f. Mulch: Within 24 hours after planting, Contractor must apply mulch in the planted area(s). The mulch must be uniformly applied to a depth of approximately one inch, or other depth as indicated otherwise, over all shrub and ground cover areas, (except Wedelia) and in three-foot (3') diameter circles around trees and palms in sod areas. Keep mulch back one (1") inch from trunks or stems.
- g. Staking and Guying

1. As detailed in in ANSI A300 (Part 6)-2012 Planting and Transplanting/2015 FDOT Design Standards where applicable.
2. The Contractor must remove and dispose of materials when it is determined that sufficient time has elapsed for the roots to stabilize the Tree, and as approved by the Town.

h. Watering After Planting

1. Initially, water the Tree to develop uniform coverage and deep water penetration of at least six inches. Avoid erosion, puddling, and washing soil away from Tree roots.
2. Provide continuous watering of Tree and sod after planting in order to achieve optimum growth conditions to establish the Tree. Water must be applied as necessary and the amount of water and frequency of watering must be based on the specific needs of each tree type, the time of year, amount of rainfall and other environmental conditions it is exposed to. This watering must begin after the Tree is planted and continue until final acceptance or for a minimum of sixty (60) consecutive calendar days, whichever is greater in time. All trees must be hand-watered during this period. Hand watering may be performed by truck or tank if water is not available at the site. Do not rely on any irrigation system that may be present to achieve this task. It may deliver the volume of water required, without flooding areas beyond where water is needed or over-watering other landscape material or it may not be operational. New sod that is needed as a result of the Work performed, must be of the St. Augustine variety, unless otherwise specified by the Town, and must be hand-watered on top immediately after placing and rolling, and once daily for one (1) week afterwards.
3. Canopy watering of existing, transplanted trees may be required at the discretion of the Town, using misting heads on PVC risers to cover entire canopy. Operate by hand or on a time clock to spray as required to keep soil at root ball from getting too wet.

i. Pruning and Thinning

1. All Work must be consistent with ANSI 300 Standards.
2. The amount of general pruning and thinning must be limited to the minimum necessary to remove dead or injured twigs and branches and to compensate for the loss of roots as a result of transplanting operations. Pruning and thinning must be done in such a manner as not to change the natural habit or shape of a Tree. The Town must be contacted prior to performing any major pruning and thinning. The Town may elect to be present during any pruning and thinning.
3. All broken or damaged roots must be cut off smoothly.
4. "Hat racking" will only be allowed with the prior written approval of the Project Manager.

j. Weeding

1. In the event that weeds or other undesirable vegetation becomes prevalent to such an extent that they threaten Tree, they must be removed. This condition will apply during the construction, maintenance and warranty periods.
2. If necessary, the planting material, mulch, sand or planting soil must be replaced as needed to eliminate weeds or undesirable vegetation at the expense of the Contractor.

k. Removal of Tree Material

1. All Trees to be removed must be removed completely, including the rootball, from the job or as directed by the Town. The remaining hole must be filled with suitable material or planting soil as directed by the Town.

3.16 Responsibility Prior to Final Acceptance

A. Maintenance Prior to Final Acceptance:

1. Maintenance will begin immediately after each Tree is planted and continue except for the watering indicated in the paragraph below. The watering must begin as indicated and must continue until completed, even if the indicated period goes beyond the time of final acceptance.
2. Tree maintenance includes watering, pruning, weeding, cultivating, repair of erosion, mulching, tightening and repairing of guys, stakes, braces, etc., replacement of sick or dead Trees, resetting Trees to proper grades or upright position, maintenance of the watering saucer, fertilizing, and all other care needed for proper growth of the Trees.
3. Immediately after planting, each Tree must be watered and the watering period must continue until final acceptance or for a minimum of 60 consecutive calendar days, whichever is greater in time. Refer to the section entitled "Watering" for additional requirements.
4. All Tree material must be weeded once a week. In the event that weeds or other undesirable vegetation becomes prevalent to such an extent that they threaten Tree material, the weeds must be removed as directed by the Town. If necessary, the Tree material, mulch, sand or planting soil must be replaced as needed to eliminate weeds or undesirable vegetation at the expense of the Contractor.
5. Insecticides and Fungicides:
 - a. Contractor must apply all insecticides and fungicides as needed, for complete control of pests and diseases during the warranty period. The materials and methods must be in accordance with highest standard horticultural practices, and approved by the Town, prior to implementation.

- b. When a chemical is being applied, the person using it must have in their possession, a specimen label and the Material Safety Data Sheet. Also, the chemical must be applied as indicated on the said labeling. Only products approved by the Federal Environmental Protection Agency are to be used. No products containing 2-4D must be used.
 - c. The spraying of insecticides and other such chemicals are to be confined to the individual Tree. Spraying techniques which may introduce the material being sprayed beyond the immediate area of the individual Tree, is strictly prohibited.
 - d. The implementation of control measures for pests and disease infestations must be in strict compliance with all federal and local regulations. Upon request, the Contractor must furnish documentation of such compliance.
 - e. All insecticides must be applied by an operator licensed pursuant to Chapter 487 of the Florida Statutes. The operator must have the license/certification in their possession when insecticides are being applied.
6. Protection: Planted Trees must be protected against trespassing and damage. If any Trees become damaged or injured, they must be treated or replaced as directed and in compliance with the specifications at no additional cost to the Town. No Work is to be done within or over planting areas or adjacent to Trees without proper safeguards and protection.
7. Keep sidewalks, curbs and gutters, drainage structures, driveways, parking areas, streets, terraces, decks and pavers free of Tree cuttings, debris and stains.
8. Material rejected during the course of construction must be removed within ten (10) working days and replaced before an inspection for completion will be scheduled.
9. If the Contractor fails to perform maintenance consistent with these specifications, as determined by Town then Town may perform any necessary maintenance and back-charge the Contractor for labor and materials.
- B. Survival and Conditions: The Contractor will be responsible for the proper maintenance and the survival and condition of all landscape items from the time a landscape item is installed until final acceptance.
- C. Replacement: Replacement of trees is the sole responsibility of the Contractor including the possible replacement of Tree material resulting from removal by theft or vandalism or acts of negligence on the part of others. All Tree material must be alive and in good growing condition for each specific kind of Tree at the time of final acceptance.
- D. Rating: The rating of Tree material according to Florida Grades and Standards must be equal to or better than that called for on the plans and in these specifications at the time of final acceptance.
